Date of Graduation    13 November B.E.2534 (1991)

#### ABSTRACT

This study is to design an appropriate guideline for coastal zone management training course. The existing courses in the field of coastal zone management or the concerned courses are collected and studied the subjects in details in order to have the holistic view what personnel in this area learnt. After that those baseline information are utilized in designing the training course guideline.

Education in the field of coastal zone management is mostly come with science and environmental subjects, such as biology, ecology, forestry, environmental science. The students are provided with basic knowledge related to environmental management in general, for example, basic ecology, environmental economics, marine pollution, land-use planning.

The training course guideline is consist of 3 parts.

Part A: Coastal Management Concept, provides the basic concepts of coastal zone resource and components of the coastal resources carrying capacity including the social value and economic. Part B: Coastal Management Techniques addresses the concepts and the methods in environmental management techniques to make the decision in administration for the environment. Part C: Special Coastal Resources gives the basic knowledge and background of mangrove forest and coral reef.
